## Socratic Philosophy as Therapy

Daniel W. Graham

Among the paradoxes Socrates advances are the claims that virtue is knowledge, and that Socrates has only a negative method to pursue his knowledge, namely his method of refutation or elenchus. So how can Socratic philosophy produce virtue? Socrates always starts with propositions extracted from his interlocutor and accepted by that interlocutor. Thus his method is highly personal and is, as he claims, directed towards the soul. But what is a soul for Socrates? He maintains that everyone desires the good; hence we are all alike in wanting the good. But some of us know what is good, while others do not. Accordingly, what makes the difference between a good person and a bad is the beliefs each person holds. Thus in Socrates' model of the soul, the relevant content is just the person's set of beliefs. Socrates' method of refutation aims to test the beliefs of an individual, showing which ones are true and which false. False beliefs held by an individual contradict true beliefs and lead to confusion and bad actions. Socrates claims that his method is like medical therapy: it heals the soul as medicine heals the body. How? By removing false beliefs from the soul. Socrates could, presumably, tell the individual which beliefs are false, but that would do no good: the individual must discover the truth or falsity of his beliefs for himself by seeing how his beliefs clash with each other. A person whose soul is purged of false beliefs will be free of contradictory impulses and will consistently and reliably make rational choices.
